The Volvo 850 Knock Sensor is a component that allows your motor to run at optimal range while it cuts back gasoline consumption. Knock Sensors work with a computer to monitor ignition timing at all times so as to avoid motor ping, which might cause damage.
Knock Sensor alters the engine's RPM idle speed to try to prevent motor knock.

Running any engine out of oil even for a very short bit will do damage. If it is a constant knock (RPM's match the knocking sound) it is most likely a connecting rod bearing, probably the 5th cylinder. Rod bearing can still make noise. If the bearing is even gone a very little, that could allow the piston to be hitting the cylinder head.
I have a 1995 volvo 850 turbo. And the check engine light is on its showing the code for the knock sensor. I was planning on putting it on my self but have no idea were it is i've spent alot of time looking for it and cant find it any help would be great thanks.

All 1993-2000 850, S70, C70 and V70 models (as well as most 2001-2008 S60, S80, V70 and XC90 models) use anti-sway bar end links with ball joint connections. These have proven to be short-lived in the Volvo application and routinely wear out and begin knocking and clunking in as little as 10,000 miles of use.
